

According to the latest notification from the Ministry of Road Transport and Highways of India (MORTH), the new battery safety amendments have been released and will become mandatory ...

We manufacture MNRE recommended & BIS approved lithium ion battery pack in India to be used for various applications like portable devices, solar street lights, UPS & inverters.

Despite some dependency on imported components, domestic EV manufacturers like Altigreen are able to design safe battery packs for their EVs.

Learn the dos and don'ts of flying with lithium-ion batteries. Follow TSA and FAA guidelines to safely pack batteries in carry-on luggage, avoid checked bags, and ensure a hassle-free travel experience.

BIS standards for lithium batteries in India set a high benchmark for safety, performance, and reliability. They play a vital role in protecting consumers, supporting domestic manufacturing, ...

Compared to traditional lead-acid or nickel-based batteries, lithium battery packs offer higher energy density, faster charging, superior safety, and longer cycle life, making them the preferred choice for ...

This article provides a high-level overview of the certification tests required for lithium-ion battery packs under the AIS 156 Standard. From vibration and thermal cycling to drop and...

In contrast, Indian companies have thus far played a negligible role in the lithium battery supply chain, which, if left unaddressed, may create energy and economic security risks for the country.

This includes verifying that the battery meets Indian regulatory standards, paying import duties, and ensuring the product is safe for use in the Indian market.

Battery packs present various safety risks that are important to consider. These risks include fire hazards, chemical leakage, electrical shock, and damage from overcharging. ...
