

Highjoule's site energy solution is designed to deliver stable and reliable power for telecom base stations in off-grid or weak-grid areas. By combining solar, wind, battery storage, and diesel backup, the ...

Maintaining a secure supply of energy at Rothera research station is critical in the upkeep of life support systems. The energy demand of the buildings at Rothera can be split into two key categories: ...

The British Antarctic Survey (BAS) has installed and activated two solar photovoltaic (PV) and energy storage systems in Antarctica as part of our commitment to reach net zero by 2040.

The UK's Ministry of Defence has for the first time installed solar EV chargers on a British military base. On August 13, 2024, Beam Global deployed the first set of solar-powered EV ARC ...

Multiple military sites, around 50 more schools and over 70 further NHS sites will save money on their energy bills thanks to up to £75 million in funding from Great British Energy.

The upgrades will focus on the installation of solar panels, heat pumps, efficient lighting systems, and advanced battery storage technology. Key Royal Air Force stations, including RAF Lossiemouth, RAF ...

£74 million for clean energy upgrades to cut bills by tens of millions for public buildings Hospitals and military bases to benefit from more efficient lighting, solar panels and heat pumps

Discover how base station energy storage empowers reliable telecom connectivity, reduces OPEX, and supports hybrid energy.

GBE says a new partnership with the Ministry of Defence will see technologies such as solar panels and micro-wind turbines deployed across a range of military sites, including remote training ground ...

To cope with the problem of no or difficult grid access for base stations, and in line with the policy trend of energy saving and emission reduction, Huijue Group has launched an innovative ...
