Use 1/4" water deflector on all full-length applications and install as instructed. Use 1" water deflectors on partial adapter applications as long as the adapter does not impede water evacuation of the intermediate horizontal.

Large cavities in IGUs can be realized by applying pressure equalization. The degree of pressure equalization has to be balanced against the moisture uptake to ensure a sufficient durability of the IGU.

This document will be updated on an as-needed basis as changes occur in the use of components in panels. The current version will be stored on UL's Industrial Control Panel website. However, previous versions of the ...

While this is a structurally strong material, the aluminum-to-glass contact point is a very efficient thermal conductor and can increase the potential for temperature differential between the center of glass and the ...

Mechanical coupling through the spacers is considered for 2-sides supported DGUs. Advanced analytical/numerical/experimental analyses were carried out. The BAM model appears valid to predict the ...

If the pressure outside the unit is higher than the internal pressure, this will cause the glass panes to deflect inwards and decrease the volume of the trapped air.

This document is intended to inform and assist the reader in the application, use, and maintenance of Vitro Flat Glass products. Actual performance and results can vary depending on the circumstances.

This guide provides an introductory overview of glass concepts and terminology, plus technical information on Cardinal glass products for both windows and doors.
