

Cape Town Department of Communications Communications Micro Base Station

Minor freestanding base telecommunication station (MFBTS) means a freestanding support structure on land or anchored to land and used to accommodate telecommunication infrastructure for the trans ...

The proposed base station is for Vodacom, MTN, Cell C and Telkom. Note that only the Telkom base station has been constructed. The application is still incomplete and has not yet been advertised.

Its goal is to enable the digital sector to grow to its full potential while guaranteeing that everyone has access to reliable, affordable, and high-speed connectivity.

There are significant economic benefits of good telecommunication infrastructure, but this must be balanced with the fact that Cape Town depends on its scenic resources for tourism.

""minor freestanding base telecommunication station" means a freestanding support structure on land. or anchored to land and used to accommodate telecommunication infrastructure and may be attached ...

After a consultation with the Recreation and Parks Department, the proposed minor freestanding telecommunication base station (MFTBS) will consist of a 12m pole with 2 sets of micro-antennae ...

The majority of the leases will be with City of Cape Town (Council), because suitable properties have been exhausted in areas where coverage issues are experienced and "gaps" exist in the network.
