

Changes in solar container battery shipments

Should EV batteries be shipped at a low SoC?

State of Charge (SoC): Strongly advocates for shipping batteries at a low SoC (ideally 30%-50%) to reduce energy available for a thermal event. The growing EV market has necessitated a dedicated regulatory framework and industry best practices. Vehicles must be securely stowed to prevent movement.

What are the new packaging requirements for lithium ion batteries?

Revised Packing Instructions: More stringent requirements for UN-certified packaging, capable of withstanding specific drop tests. State of Charge (SoC) Emphasis: Increased scrutiny on the SoC for standalone lithium-ion battery shipments, with a general requirement not to exceed 30% of rated capacity.

How to secure a lithium battery container?

Segregation: It is recommended to segregate lithium battery containers from those containing other dangerous goods, particularly flammables, by at least one container bay (6 meters). Securing: All cargo must be secured within its container and on the vessel in accordance with the CTU Code and the vessel's Cargo Securing Manual.

What are the classification and shipping requirements for lithium-ion batteries?

The classification and shipping requirements for lithium-ion batteries depend on their size and energy capacity (Watt-hours). For standalone batteries. Strict UN-certified packaging. IUMI strongly supports the SoC limit of 30% for air freight and advocates similar principles for maritime transport.

Why Lithium Batteries Act Like Picky Airline Passengers Imagine your lithium-ion battery as a VIP traveler - it demands special handling but can throw a tantrum (read: thermal runaway) if treated like ...

The truth is, you can't change federal policy. But you can control how you move, stage, and deliver solar modules, inverters, and battery systems. This guide lays out the Solar Smart ...

Navigating the Complexities of Lithium Battery Logistics The rising global demand for new energy products has significantly increased the volume of battery and solar panel ...

This artificial scarcity, while legal, limits flexibility for solar shipments. 4? Peak Season & Container Shortages With Q3 demand rising across industries, container shortages and port ...

The maritime industry is witnessing a significant shift in cargo composition, with lithium-ion batteries and their applications (EVs, BESS) becoming increasingly prevalent. While these ...

Solar container battery shipment forecast Are battery-powered container ships a viable business case? We find that battery-powered container ships applying the hybrid power plant philosophy have a ...

This development has significant implications for global supply chains, and it's crucial to understand the

Changes in solar container battery shipments

changes and prepare accordingly. Heightened Scrutiny on Battery Exports In ...

Recommended limits on state-of-charge for certain lithium-ion batteries in air transport (2025 recommendations, with further updates expected). UN numbers for battery-powered vehicles ...

What Is Driving the Global Shift in Battery Storage Shipments? In the past two years, the global market for lithium battery energy storage systems (ESS) has experienced a clear shift: exports ...

Sea freight rates have surged 300% in 2025. Red Sea disruptions, tariff changes, and carrier surcharges affect solar importers.
