

Communication and sharing of 5g base station energy methods

This review of the scientific literature is developed and presented in order to explore various aspects of energy consumption and thermal ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a description model for ...

This review of the scientific literature is developed and presented in order to explore various aspects of energy consumption and thermal management strategies in last-generation mobile ...

5G base station has high energy consumption. To guarantee the operational reliability, the base station generally has to be installed with batteries. The base s

The electricity cost of 5G base stations has become a factor hindering the development of the 5G communication technology. This paper revitalized the energy storage resources of 5G...

The proposed algorithm can promote the cost reduction of base station and the local consumption of renewable energy, and contribute to the construction of 5G network and new power system.

BSs play a vital role in providing coverage and capacity by using different frequency bands adapting to diverse communication needs. The choice of a specific frequency band can impact network performance, data rates, ...

To address this, we propose a novel deep learning model for 5G base station energy consumption estimation based on a real-world dataset. Unlike existing methods, our approach integrates the Base Station Identifier ...

This research paper provides an exhaustive analysis of green communication strategies in 5G and next-generation networks, covering energy-efficient technologies, resource management, renewable energy ...

The work begins with outlining the main components and energy consumptions of 5G BSs, introducing the configuration and components of base station microgrids (BSMGs), as well as categorizing ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates communication caching and linearization ...
