

The company claims these spheres could achieve 60 times more energy output than solar panels in natural or artificial light.

The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar panels. The ball lens is able to concentrate and diffuse light on one small focal point, which means less material ...

A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere!

The initial globe design harvested up to 70% more solar energy than photovoltaic panels by using dual axis tracking. The sphere can be used to harvest sunlight for electricity or thermal energy, it can be ...

The sphere is filled with water and magnifies the sun's rays by more than 10,000 times. This makes it possible to produce energy from the moon or the sun even on cloudy days.

Created by the German architect Andr#233; Broessel, it is a transparent ball filled with water capable of converting up to a 70% more energy than a classic solar panel.

That's because the business, which has operations in New York City, says its experts have created tiny globes -- from a little more than an inch to nearly 4 inches in size -- that can harness ...

Look at the solar power generator in a form of sphere. Read the advantages of this model.

His simple but effective sphere design incorporates different materials into a striking installation that delivers solar-generated electricity, even at night. The technology has real potential ...

The betaray crystal sphere is a weatherproof glass ball which concentrates sunlight and moonlight into an intense beam that can generate electricity up to 70% more energy than solar panels.
