

# Energy Storage System Science and Technology Progress Award

Relying on two 600,000-kilowatt thermal power units of the Ningxia Power Lingwu Company of the China Energy, the project successfully developed a 22-megawatt/4.5-megawatt-hour ...

This award is conferred on individuals or organizations that have made outstanding contribution in applying and disseminating advanced research results or completing major R&D projects, plans ...

This is an open award. Nominees for the award should have a record of activity in the research or product development of energy storage for communications energy systems.

To improve the low utilization efficiency of industrial flue gas waste heat caused by high dust content and significant temperature fluctuations, a novel horizontal flue gas-solid sensible heat storage device ...

The energy storage system has not only greatly improved the capacity of PV consumption and grid support, but also achieved a technological breakthrough in the photovoltaic energy storage ...

Research Achievements Provincial Science and Technology Progress Awards (in recent 3 years)

This advancement paves the way for the development of liquid metal battery storage technology, providing an important low-cost, long-life, high-safety medium-to-long duration energy storage...

Zhang Chenghui, professor of the School of Control Science and Engineering at Shandong University, wins the second prize of the National Science and Technology Progress Award and poses...

Currently serving as an Associate Professor at the School of Automation, Central South University, he has made significant contributions to advancing low-carbon energy systems, fault ride-through ...

Winners announced during the Beers & Batteries After-Party, hosted by TruGrid, find out who came out on top! The Developer of the Year category is designed to recognise companies that have been ...
