

Representatives from Emory Law School, Georgia Institute of Technology, and University of Georgia developed this Model Ordinance in response to the rapid development of solar energy in Georgia. It ...

Through proactive planning and partnership, PV solar development can help meet Georgia's renewable energy needs, minimize impacts to natural resources, and maximize opportunities to increase co ...

for electricity generation, consumption, storage, or transmission, or for thermal applications. For purposes of this ordinance, a solar energy system refers only to (1) photovoltaic solar energy ...

Most HOAs will require a permit prior to any installation taking place, and this can be obtained from your local government office or through the homeowner's association. Homeowners ...

4.1. Solar energy systems may not be connected to any electric utility grid without the approvable of the applicable electric utility. Off-grid solar energy systems shall be exempt from this requirement.

We have constructed and are operating 16 solar farms and additional demo facilities across the state of Georgia, many in partnership with military installations.

Georgia is rapidly emerging as a hub for renewable energy innovation, with photovoltaic (PV) energy storage projects leading the charge. This article explores the latest developments, key players, and ...

The ARO liability includes the cost estimate to dismantle the solar generation site and return the land back to it's near original state, as well as the estimated cost to recycle the panels once they are ...

The Georgia Model Solar Zoning Ordinance provides a comprehensive template to help cities and counties in Georgia draft regulations for various types and sizes of solar energy systems.

The document provides photovoltaic (PV) solar facility developers with recommended practices to consider. Ranging from site selection to construction to operation/maintenance, our ...

Yes, Georgia has set specific targets for energy storage deployment through the Georgia Energy Storage Initiative (GESI). The state aims to deploy 1,200 megawatts (MW) of energy storage by 2024.
