

o At the end of 2024, solar was the second-largest source of U.S. generation capacity, though still a growing percentage of the U.S. electric generation mix. o In 2024, solar represented ...

The commercial solar segment set a second quarter record, growing by 27% compared to Q2 2024, and adding 585 MW dc of new capacity. Growth in California drove this increase - a ...

Across all regions, developing a skilled workforce and setting ambitious solar and storage targets are essential tasks. In these times of political uncertainty, low-cost solar power could turn into ...

Over the past years, solar energy has been proven to be an important renewable energy source due to its limitless availability and environment-friendly nature, contradicting the finite fossil ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed ...

When solar energy, together with wind energy, forms a high share of power generation in a grid, any excess swings in power frequency can lead to blackouts, as seen in Spain and Portugal ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...

In this analysis, we examine the latest trends in installations, costs, and market dynamics, providing solar businesses, developers, and investors with a comprehensive picture of ...

In this piece, we'll take an in-depth look at the current opportunities and future prospects within the commercial and industrial (C&I) solar sector. Commercial and industrial solar developers ...
