

“Ireland has made huge progress in our journey to renewable energy. Wind power supplied approximately one third of national electricity demand in 2024, with renewables accounting for ...

These figures demonstrate how rapidly solar generation has scaled up in Ireland's energy system. With ongoing upgrades to the grid and further innovation in network control, the country is ...

Overall, 27% of electricity in August came from wind, with 5% coming from solar. Gas was the single largest source of electricity generation for the month at 45%, with 19% coming from ...

According to the Sustainable Energy Authority of Ireland's (SEAI) provisional data for 2025, monthly utility-scale solar generation has increased from an average of 0.73 TWh in 2024 to ...

EirGrid's National Control Centre carries out the complex task of balancing the supply of solar energy alongside conventional generation sources and other renewable resources such as ...

Solar remains Ireland's fastest connecting renewable energy resource, with approximately 950 rooftop systems coming online week and a pipeline of over 21 GW of solar and solar-hybrid projects.

Despite cloudy skies, Ireland is embracing solar power. Private homes and farms across the country generate clean energy, cut bills, and help meet climate targets

The rapid growth of solar energy in Ireland marks a pivotal moment in the country's energy journey. With strong government support, technological advancements, and increasing public ...

Ireland has achieved a major milestone in renewable energy, exceeding its 2024 target for solar power generation well ahead of schedule. Energy Minister Eamon Ryan announced that the ...

This future system must be able to run smoothly even on days of low wind and sunlight. The report explores options for back-up generation and storage most suited to Ireland's ...
