

## Is it safe to install photovoltaic panels on the rooftop for thermal insulation

Can solar panels cool a roof?

A study from the University of California, San Diego, found that solar panels can reduce the roof temperature by an average of 5 degrees Fahrenheit during the day. This cooling occurs because solar panels absorb sunlight that would otherwise hit the roof and convert it into energy, reducing the heat transferred to the building.

Are solar panels safe?

While solar technology is generally considered safe, the public has raised certain health concerns, which typically fall into three categories: electromagnetic fields (EMFs) and radiation, chemical exposure from the materials used in solar panels, and the potential thermal impact on homes and neighborhoods.

Are solar panels safe to recycle?

Recycling programs for solar panels help manage end-of-life materials, preventing environmental harm and protecting public health. The long-term health benefits of solar panels, including reduced pollution and lower carbon emissions, far outweigh the minimal risks associated with their use.

Are solar panels toxic?

Although some solar panels contain metals considered toxic in large quantities, it is very rare for humans to become exposed to these elements at any point in the equipment life cycle. In the best interest of our customers and the planet, PPM does not install solar panels manufactured with toxic materials.
