

# Is structural adhesive used in photovoltaic panel production

We recently caught up with Scott Bader's solar PV expert, Andrew Harvey, on the improvements structural adhesives bring to solar installation, and how they should be used for optimum installation.

Contrary to silicone adhesives, structural adhesives, particularly epoxies, offer distinct advantages that are critical for specific applications within solar panel assembly.

Structural bonding, frame sealing, and potting solutions for photovoltaic panels. Bonding and sealing solutions for solar thermal flat plate collectors. Sika's versatile bonding solutions enhance productivity ...

Although silicones do not have very high tensile shear strengths compared to other types of adhesives, they have proven successful in some structural adhesive applications.

We recently caught up with Scott Bader's solar PV expert, Andrew Harvey, on the improvements structural adhesives bring to solar installation, and how they should be used for optimum ...

A: Testing, static and after climate cycling, has been conducted to confirm that the adhesively bonded rail or flexible solar panel will last the 25-year service life of the solar PV panel. ...

Structural adhesives are used to bond solar panel rails to roof tops by bonding to metal or concrete. Eliminate the need to drill into your roof and save time with adhesives.

For photovoltaic panel manufacturers, using structural adhesives in place of mechanical fasteners will help them to build a better product, faster, more simply and with less cost.

Sika's fast curing structural adhesives and sealants not only carry out these essential functions, but also open up new design opportunities where reduced frame materials or larger module sizes become ...
