

Is there solar power generation around the tomb

Now, let's go even deeper. Engineer Christopher Dunn has a theory that will change how you see the pyramids: he believes the Great Pyramid wasn't a tomb -- it was a power plant.

A solar event, possibly a coronal mass ejection, could have unleashed lightning and radiation powerful enough to vitrify rock and wipe out large mammals like saber-toothed tigers. Such ...

Installed on a small hill, its solar cells on the two short sides are what attracted my attention on a recent walk. My guess is that the cells charge batteries during the day, which in turn ...

What the AI discovered was breathtaking: repeated electromagnetic anomalies surrounding the center of the Great Pyramid of Giza and several others within a close vicinity. The ...

Explore the fascinating history and energy use of solar temples, revealing their innovative designs and ecological impact on ancient civilizations.

Christopher Dunn, an engineer and author, offers a revolutionary hypothesis. He suggests that the Great Pyramid was not a tomb but a power plant--an intricate machine harnessing ...

Many believe it served solely as a tomb for Pharaoh Khufu, yet some experts propose it had an alternate purpose as an ancient power generator. Traditionally viewed as a mere burial site, ...

At the core of this theory lies the audacious notion that the Great Pyramids were sophisticated electrical generators, capable of wirelessly transmitting electricity across ancient Egypt. ...

The Great Pyramid may represent far more than an ancient tomb. It could be a testament to a lost civilization's mastery of energy, sound, and electromagnetic forces -- knowledge that, if fully ...

A: While some researchers explore unconventional theories, the power plant hypothesis lacks substantial scientific evidence. Most scholars agree that the pyramids served as funerary monuments ...
