

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Share of electricity production from solar, 2025 Measured as a percentage of total electricity produced in the country or region.

Solar power was growing quickly, but it wasn't profitable. The future of the sector was unclear. This is when a 30-year-old Spanish industrial engineer named Dario Lopez took a big leap. ...

According to the International Solar Energy Society, solar power is on track to generate more electricity than all the world's nuclear power plants in 2026, than its wind turbines in 2027,...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take...

Discover which countries are taking advantage of solar power and how they are implementing systems to use solar as a viable source of energy.

Water for homes, buildings, or swimming pools Air inside homes, greenhouses, and other buildings Fluids in solar thermal power plants Solar photovoltaic systems Solar photovoltaic ...

Solar power is energy from the sun that is converted into thermal or electrical energy. Solar energy is the cleanest and most abundant renewable energy source available, and the U.S. has some of the ...

Solar energy is a form of renewable energy, in which sunlight is turned into electricity, heat, or other forms of energy we can use. It is a "carbon-free" energy source that, once built, ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to ...

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what solar ...
