

Deep in the Kubuqi desert in north China's Inner Mongolia Autonomous Region, rows of blue solar panels glisten under the winter sun, converting sunlight into electricity that flows into ...

The power station is located in Wanning City, Hainan Province, China, and is supplied by Trinasolar. The project adopts Trinasolar's Vertex N 700W series modules, with an average annual power ...

With Japan launching its first osmotic power plant in August 2025 and European pioneers scaling innovative membranes, this blue energy source could transform the renewable energy mix ...

As of August 2025, Japan has established an osmotic power plant in the city of Fukuoka -- the first of its kind in Asia and the second worldwide, following a similar facility established in...

This innovative design holds the potential to reshape the landscape of blue energy generation. In terms of osmotic performance, Sweetech Energy's technology could be around 20 or 25 ...

In summary, regulators are beginning to see osmotic power as a viable new tool to meet climate goals. The framework to approve projects is largely in place (borrowing from water and ...

A net-zero microgrid for the Oregon Military Department was developed with the addition of a Blue Ion LX system to slash generator dependency by half and enable the use of on-site solar power during ...

We highlight the principal advancements in power generation through different 2D membranes and expand the investigation from nanopores to milli pores.

But thanks to a world-wide shift in the urgency of CO2 reduction, led by manufacturers and national governments alike, New Energy Blue is poised to produce a new generation of bioenergy that can ...

Japan's first osmotic power plant has gone live in Fukuoka City, providing the local region with electricity using the difference in salt concentration between seawater and fresh water.
