

A Power Wizard study released earlier in July found that remote work increases electricity prices by about 6.8 percent, or \$109 more per year. That does depend on location, though.

Energy prices have risen roughly twice as fast as overall inflation since the COVID-19 pandemic. The increase is not driven only by volatile fuel markets or the political fight over renewable...

Retail electricity prices have increased faster than the rate of inflation since 2022, and we expect them to continue increasing through 2026, based on forecasts in our Short-Term Energy ...

Over the past two years, demand for outdoor power solutions - including solar generators, portable power stations, and hybrid energy systems - has surged by 43% globally. But will prices keep ...

Electricity prices for households have risen quickly and are expected to outpace U.S. inflation in coming years, experts said. There are many supply and demand factors at play.

High demand for electricity during a peak period (e.g., hot weather) or sharply reduced supply (e.g., an unexpected shutdown of a major power plant) would drive up retail prices of electricity.

Now, the new shock comes in electricity bills. Power charges have jumped roughly 4.5 percent in the past year -- nearly double the broader Consumer Price Index (CPI) -- driven by ...

Many states that have seen a major expansion of wind and solar power, like Nevada or North Dakota, have seen prices stay flat or decline, although there are some important exceptions to ...

U.S. electricity prices have risen nearly 30% since 2010. Learn what's driving higher power bills -- and how policymakers can help bring relief.

In August, electricity prices jumped 6.2% from a year earlier and are now up more than 30% over the past four years, according to the Consumer Price Index. That rise has hit families hard ...
