

It is provided by the World Bank Group as a free service to governments, developers and the general public, and allows users to quickly obtain data and carry out a simple electricity output calculation for ...

Photovoltaic systems account for the great majority of solar capacity installed in the world. CSP represents a minor share of solar power capacity, and is present in significant quantities only in a few ...

Looking ahead, solar energy is expected to significantly change the world's energy system, with forecasts saying it could generate half of the world's electricity by 2050.

Covering the world's rooftops with solar panels could provide 65% of global electricity, according to the findings of new research from the University of Sussex.

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

In April 2022, the total global solar power capacity reached 1 TW. A new study has found that 50 of the world's rooftops could be covered with solar panels to meet the world's yearly ...

Covering rooftops across the planet with solar panels could deliver 65 per cent of current global power consumption and almost completely replace fossil fuel-based electricity, and it could ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

If the world covered every suitable roof with solar panels, it could supply 2/3 of humanity's total electricity consumption - allowing the globe to transition completely off of fossil...

Discover the world's biggest operational solar farms and the mega projects set to reshape tomorrow's renewable energy landscape.
