Thin-film photovoltaic (PV) technologies address crucial challenges in solar energy applications, including scalability, cost-effectiveness, and environmental sustainability.

OverviewHistoryTheory of operationMaterialsEfficienciesProduction, cost and marketDurability and lifetimeEnvironmental and health impactEarly research into thin-film solar cells began in the 1970s. In 1970, Zhores Alferov's team at Ioffe Institute created the first gallium arsenide (GaAs) solar cells, later winning the 2000 Nobel prize in Physics for this and other work. Two years later in 1972, Prof. Karl Berlinger founded the Institute of Energy Conversion (IEC) at the University of Delaware to further thin-film solar research. The insti...
