

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

What are the different types of solar panels used in power plants?

The types of solar panels used in these types of facilities are also different. While solar thermal plants use collectors, photovoltaic power plant use panels consisting of photovoltaic solar cells made of silicon (monocrystalline or polycrystalline solar panels) or other materials with photovoltaic properties (amorphous solar panels).

Is a solar power plant a conventional power plant?

The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels. Or there is another way to produce electrical energy that is concentrated solar energy.
