

What is a circulation pump?

These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops. We have a number of circulation pump solutions for all types of applications, from single family home hot water systems, to industrial heating and air conditioning systems.

How much does a solar water pump cost?

The cost varies dramatically. A small, all-in-one solar fountain pump kit can be \$20 - \$50. A larger solar well pump costs between \$1,200 and \$3,000, for an average of \$2,000. Prices depend on the well pump size, flow rate, and more. What are the disadvantages of a solar water pump?

How do solar water pumps work?

The operation of solar water pumps is straightforward yet highly efficient. When sunlight hits the solar panels, photovoltaic cells within the panels generate direct current (DC) electricity. This electricity is then transmitted to the controller, which adjusts the voltage and current to match the requirements of the pump.
