

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already operating 1.4 TW ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

Hundreds of rows of gleaming panels blanket swathes of scrubby sand at sunset in a remote northern Chinese desert -- once the biggest solar farm in the world.

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and ...

From this remote landscape of light and sand, in the Ningxia Autonomous Region, a power line stretches across mountains, plateaus and valleys to reach Hengyang, in the industrial ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

As a global leader in solar panel manufacturing, China produces a variety of solar products designed for outdoor applications. This guide delves into the features, types, and benefits of ...

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field of solar panels, fixed to steel trusses in shallow water, has become the world ...
