

# Solar photovoltaic power generation installed in the United States

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Solar has become the largest renewable source of installed power capacity in the United States, surpassing wind after 27 consecutive months as the leading source of new grid additions, ...

The SEIA report tallies all types of solar energy, and in 2007 the United States installed 342 MW of solar photovoltaic (PV) electric power, 139 thermal megawatts (MW th) of solar water heating, 762 MW th ...

In the first nine months of 2025, more than three-quarters of the electrical generating capacity added in the United States was solar power, according to new data published by the ...

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.

Stay up-to-date with the latest statistics and trends in the US solar power industry, including key metrics such as installed capacity, market share, and revenue.

U.S. PV Deployment EIA reported that the United States installed 36.2 GWac of PV in 2024--up 34% y/y. SEIA reported that the United installed 50.0 GWdc of PV in 2024--up 21% y/y. At ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

In Q3 2025, the residential segment installed 1,088 MWdc of solar capacity, declining 4% year-over-year and quarter-over-quarter. Despite an industry rush to bring projects online this year to ...

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...
