

What is solar assistant?

Solar assistant is a monitoring tool based the most powerful, low cost and globally available device on the planet: the Raspberry Pi. SolarAssistant provides metrics of your entire solar system live up to 2 seconds. SolarAssistant is a standalone system that can be used without the internet.

What is solarassistant?

SolarAssistant is software used to monitor and control your solar system in real time and can be purchased from the SolarAssistant site. This instructable is designed as a technical reference for myself & also a guide for someone considering using SolarAssistant with a similar setup.

How to use solar assistant on Raspberry Pi?

Solar Assistant will automatically detect the Raspberry Pi connected to the local network. Activate your device through the "Configuration" tab to enable remote access. Select "Activate device" to activate and register the device simultaneously. If you haven't already, activate the SOK 48v100Ah battery as described in the power-up procedure.

How does solarassistant work?

SolarAssistant is powered from a 5v Raspberry Pi PSU plugged into a wall socket off the standard ring main in my garage. A USB to RS485 CP2102 converter plugs into a USB port and the A+ & B- outputs are connected to pins 4 & 5 of a RJ45 plug.
