

The methodology used in this article is rooted in a historical analysis of the sector's ongoing transformations and supported by surveys and methodological studies conducted in recent years - as ...

Syria is in a bright sunbelt and has a lot of populated land. There are also strong wind corridors in some parts of the country, and it is at the crossroads of the Levant. All of these things ...

Syria's proximity to the EU makes it a strong candidate for near-shoring and diversifying energy supplies. The EU should therefore take a more assertive role in supporting Syria's renewable ...

After more than a decade of war, Syria's energy sector lies in ruins--but the scramble to rebuild it is already underway. With former Syrian President Bashar al-Assad gone, oil and gas ...

Committed to transforming the electricity landscape and increasing the adoption of renewable energy in Syria, the government is aiming to have 10% of electricity generated from solar ...

Syria is working to rebuild its energy sector after years of civil war and crippling sanctions. The country has suffered severe electricity shortages, with only those who can afford them using costly solar ...

In a strategic step supporting economic recovery and international reintegration, Syria participated in the sixteenth session of the International Renewable Energy Agency (IRENA) ...

Syria's prolonged conflict has collapsed its electricity infrastructure and deteriorated conventional energy sources, compelling a swift transition to renewable energy.

Syria's new leaders are hoping renewable energy will now become more than a patchwork solution.
