

Syria is working to rebuild its energy sector after years of civil war and crippling sanctions. The country has suffered severe electricity shortages, with only those who can afford them using costly solar ...

This in-depth editorial investigates how solar energy is becoming a national priority in Syria, the motivations behind the move, the challenges on the ground, and what the future may hold.

This study provides a foundational analysis for developing large-scale photovoltaic (PV) solar power plants in Syria, with the potential to scale installations to capacities of 300 MW, 500...

Yet its path toward solar power has been driven less by strategic foresight than by the pressures of necessity, unfolding as a story of resilience, adaptation and uneven progress. Across ...

In a landmark move for its energy sector, Syria has partnered with the US-based firm 20 Solar Energy LLC to develop an ambitious 200 MW of solar projects across the country.

Investment is beginning to return to the country with the lifting of U.S. sanctions, and major energy projects are planned, including an industrial-scale solar farm that would secure about a...

This article explores Syria's transition towards solar energy, highlighting government initiatives, private investments, and the challenges that remain in restoring its energy infrastructure.

According to the government, the project will increase the country's renewable energy capacity and contribute to curbing power outages. This initiative aligns with a series of recent large ...

Syria's ministry of electricity has announced a new 100-megawatt photovoltaic power station to be built to tackle the nation's energy crisis, following over a decade of unrest and economic ...

Damascus launches a fixed-tariff scheme for 2-10 MW green power and signs a deal with 20Solar Energy to build twin 100-MW solar plants, one with battery storage. Syria has taken its most ...
