

The highest solar power generation in my world

Solar energy capacity is growing rapidly, driving the global transition to renewable energy. This graphic visualizes the top 15 countries by cumulative megawatts of installed ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Explore the top solar power countries in 2025, including China, the U.S., India, Japan, and Germany, plus emerging leaders like Brazil and Australia, driving the global shift to sustainable ...

Discover the top 5 solar-powered countries in 2025. From China to India, explore global solar capacity, growth trends, and future projections in renewable energy.

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

China continues to dominate the solar race, single-handedly producing more than 580 TWh of solar electricity in 2023 -- more than the next five countries combined.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

OverviewAfricaGlobal use figuresAsiaEuropeNorth AmericaOceaniaSouth AmericaMany African countries receive on average a very high number of days per year of bright sunlight, especially the dry areas, which include the arid deserts (such as the Sahara) and the semi-desert steppes (such as the Sahel). This gives solar power the potential to bring energy to virtually any location in Africa without the need for expensive large-scale grid-level infrastructural developments. The distribution of solar resources across Africa is fairly uniform, with more than 85% of the continent's lan...

China is the largest solar electricity producer in the world with 224,100 GWh generation per year. United States of America comes second with 107,274.828 GWh yearly generation. With 74,522 GWh of ...

According to the BP Statistical Review of World Energy 2022, the top solar-capable nations create our list of 15 countries that generate the most solar energy. And the IEA installed ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...
