

## The scale of solar energy storage grid connection is expected to grow

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

The grid-scale segment is projected to increase 32% year-over-year with 11 GW/32.7 GWh deployed by year-end, and 62 GW cumulatively from 2024-2028. Over the next five-years, 12 GW of ...

Connecting new electric generation and storage is urgently needed to meet this growing demand. Energy storage is particularly well-suited to provide needed reliability services and is ...

Federal Energy Regulatory Commission Order 2222 is expected to accelerate aggregated DER participation in wholesale markets. 30 In 2026, developers are likely to accelerate solar-plus-storage ...

Storage deployment in the United States grew across all segments and is forecast to grow another 25% in 2025, according to Wood Mackenzie.

For solar-plus-storage--the pairing of solar photovoltaic (PV) and energy storage technologies--NLR researchers study and quantify the economic and grid impacts of distributed and ...

Solar and battery storage are expected to lead new US generating capacity additions in 2025, says the US Energy Information Administration (EIA).

Solar has grown to play an increasing role in many states, now making up more than 20% of electricity production in four states. As electricity prices continue to rise and electricity demand continues to ...

The total grid-scale capacity forecast over the 5-year period increased 2% compared to Q2. The 2024 volume decreased by 5% but consistent growth is expected from 2025 onwards, driven by new ...

While natural gas, coal, and nuclear power remain dominant, their combined share of generation is expected to decline as renewable energy expands. Utility-scale solar is the fastest ...
