

KLD-PNS series portable solar PV module is an independent PV power generation system that integrates functions of charging and discharging control, inversion and energy storage.

KLD-NS series monofacial solar PV module can maximize the efficiency of converting solar energy into electricity. It's easy to install, lightweight and suitable for a variety of brackets.

It can not only solve the problem of electricity consumption in areas without electricity and with limited electricity, but also make use of the difference in peak and valley price to reduce the cost of ...

High-performance solar panels with up to 21.7% efficiency. Features monocrystalline silicon cells, Class A rating & comprehensive temperature tolerance. IEC certified.

Tysen-KLD fully branched out into the new energy field, engaging in business sectors such as PV power generation, energy storage systems, micro-grid, and charging pile.

Detailed profile including pictures and manufacturer PDF.

It integrates battery cell, battery management system (BMS), power conversion system (PCS), energy management system (EMS), active safety and thermal management system, which is applicable for ...

As both manufacturer and supplier, Tysen-KLD ensures quality, performance, and seamless coordination across every stage of your energy system from design to delivery.

KLD-NW series bifacial PV module can make better use of solar energy resources. Each side of the bifacial module has been specially designed to maximize the absorption rate, which can increase the ...
