What is solar energy & how does it work?

UK Guide for 2026 Solar energy is a clean, reliable, and ideal source of renewable energy. It can be used to heat the water in your home or produce electricity, all without creating emissions or pollution. In simple terms, solar panels absorb sunlight and convert it into electricity that can be used to power your home.

How do solar panels produce electricity?

**Solar Energy Capture:** When sunlight reaches the photovoltaic cells in a solar panel it excites the electrons within the cells. The movement of electrons causes the flow and creates an electrical current. The individual cells in a solar panel are in series connection to increase the voltage of the generated electricity. **2. Inverters:**

How do solar carports work?

Now that you know what solar carports are, let's talk about how they work. These systems function by using solar panels installed on their roofs. The panels absorb sunlight and convert it into electricity. Here's a simple breakdown of the process: **Sunlight Hits the Panels:** Solar panels are made of special materials that capture sunlight.

Are solar panels putting out electricity?

The sun is always putting out energy, but how much electricity you actually get from your panels fluctuates based on several site-specific and environmental conditions. The optimal performance of a solar array is determined by its exposure to direct sunlight. Point panels true south (U.S. rule of thumb) to soak up sunlight from dawn to dusk.
